

Tunnel washers in various configurations

Tunnelwashers

Design:

The tunnel washers produced by Milama are based on standard designs which are then adapted to meet the demands of the customer. A tunnel washer is often integrated into an existing production chain which places both limitations and demands on performance and design e.g. type of transporter, number of steps, degree of cleaning and goods size. For this reason we've chosen not to present a specific model but adapt every machine to the needs of our customer.

Tunnel washer with transport mat

Rotating tunnel washer which collects and deposits goods in the same position

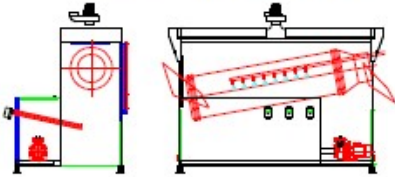

Tunnel washer with hang conveyor

Tunnel with screw-feeder

Pallet washer with pallet magazine

Tunnel washer with chain transport and robotic loading/offloading

Manual or Automatic roller conveyor
